## A NEW C4 BRANDED PRODUCT TOWARDS MINI EXCAVATORS.

Its use is foreseen on excavators from 1.8 to 3 tons.

The hydraulic system has been suitably designed and sized to ensure downstream the power required by the tool group and upstream to adapt to the incoming oil flow rates by the excavator. The heart of the equipment is the tool support cradle, which is the interface that allows the connection of many tools to the tool holder frame while keeping only one main machine body. These features make our Multitool a product externally versatile and useful for many uses.

Quick exchange tool's system through pins.

Transmission with reduced chain.

Standard with adjustable manually saddle on 4 positions.
